

I claim:

1 1. A method for removing an overflow condition comprising the steps of:
2 detecting a first data stream portion causing an overflow condition;
3 delaying said first data stream portion; and
4 accelerating a second data stream portion that is preceded by said first
5 data stream portion.

1 2. An apparatus for removing an overflow condition comprising:
2 means for detecting a first data stream portion causing an overflow
3 condition;
4 means for delaying the said data stream portion; and
5 means for accelerating a second data stream portion that is preceded
6 by said first data stream portion.

1 3. A computer-readable storage medium storing program code for causing a
2 computer to perform the steps of:
3 detecting a first data stream portion causing an overflow condition;
4 delaying said first data stream portion; and

5 accelerating a second data stream portion that is preceded by said first
6 data stream portion.
